

Deployment environment:

1. The project is deployed locally through the Apache Web Server in XAMPP. We created the SQL database instance on GCP and a local php file connects to the database GCP. The IP address of the user is registered on the GCP instance.
  
2. Instructions / steps needed to deploy and run the project
  - Clone or download the Github repository from <https://github.com/szellen/CS4760-Food.git> or <https://github.com/szellen/CS4760-Food> into XAMPP htdoc folder.
  - Launch the APache Web Server in XAMPP
  - Add IP address to the GCP database, and start XAMPP apache service.
  - Visit the project at <http://localhost/cs4760-Food/home.php>, and register for a new account
